

Tracy Turfait

[linkedin.com/in/tracy-turfait-257ab74b](https://www.linkedin.com/in/tracy-turfait-257ab74b)

Tracy is an American (Texan by birth!) married to a Frenchman, and has three French-American children. Two of her three children are LFSD students, one being in CP and the other in CE2. She lives with her family in La Mesa and relocated to San Diego from Atlanta, Georgia right before the pandemic.

Tracy is a mechanical engineer, who has spent 20 years in the construction industry and now works as an expert witness in construction related disputes. Tracy has both engineering and general contractor experience from working on large-scale construction projects in the oil and gas, energy and automotive industries both domestically and internationally. She has worked on offshore oil and gas pipelines, natural gas fired simple and combined cycle power plants, co-generation power plants, fossil fuel fired power plants, solar power plants and on geothermal generation projects.

She holds a B.S. degree in Engineering from Texas Christian University (TCU) and a M.S. degree in Mechanical Engineering from Georgia Institute of Technology. She has also studied at Georgia Tech Lorraine in partnership with the Ecole Nationale Supérieure d'Arts et Métiers in Metz, France and Paris.

Tracy is currently serving in the PTR as the Events Coordinator and recently joined the Board of Directors. Tracy loves soccer, camping, traveling and practicing her poor conversational French so she can one day obtain a good level on the French TCF test.
